

# Silverado 13.7 the flagship, when the rib becomes yacht

*13.70 meters in length, a spaciousness worthy of a yacht, high performance and a maneuverability and speed typical of inflatables. This is the new Silverado 13.7 by Nautica Cab*

Silverado 13.7 is a maxi rib with a classic line where everything is as you would expect it to be. However, with a closer look, what you can see is a great care in the project that has provided a unique result.

In fact, outside it is equipped with a classic stern and bow sunbathing, a large dinette and a fully equipped kitchen. But it is inside that the design studio "TDF Thedesignfactory Locarno & Vienna" gave his best. Here you find a true master suite and a sofa, that ables the accommodation of a third person. All with a unique feature: the large top window of the cab offers light and airiness typical of a yacht.

The study of the hull of the Silverado 13.7 was done by the studio "Akesdesign" - Eng. Alessandro Chessa. The hull has been designed to have the best navigation skills for a medium-fast cruise in rough seas; this means a constant over a wide speed range, high directionality and stability in turns and, of course, a perfect seaworthiness. To achieve this result, it was adopted a new type of hull: slim with a wide curve of the bow, a variable V with stern deadrise of 24°, non-linear sections and a pronounced flare in the forward part with three orders of steps on each side; there are also a deflector and a small bracket-step in the stern.

All of this was possible through an accurate analysis of the model and a numerical control of the weights on board.
